

Ultrasonic sensors

 **di-soric**

The ultrasonic sensors from di-soric are used as proximity switches in automation for distance measurement and for web edge control. They make it possible to detect objects with any color or surface. Even transparent, liquid and powdery objects are securely detected. The sensors are insensitive to contamination and can be operated across long distances.

US-M8

The US-M8 is the smallest ultrasonic sensor that can be integrated into machines very easily with its compact housing dimensions. At short ranges, the US-M8 offers maximum flexibility, even where installation space is limited, and is perfect for modernizing systems.

Technical data (typ.)	+20 °C, 24 VDC
Service voltage	18 to 30 V DC
For more information, visit	www.di-soric.com

Operating range (mm)	Housing design	Sound outlet	Switching output	Analog output	Reproducibility	IO-Link	M/I/O	Ambient temperature (°C)	Plug connector	Connection cable (optionally available)	Product description

US-M12

The US-M12 is the compact class of ultrasonic sensors in the M12 housing. Equipped with an IO-Link interface, the sensor can be operated to switch or to measure. The sensitivity can also be adjusted via auto-teach, so the sensor is thus operational within a few seconds.

Technical data (typ.)	+20 °C, 24 VDC
Service voltage	18 to 30 V DC

US-Q12

The US-Q12 is the compact class in cubic form and with a small mounting depth. Equipped with an IO-Link interface, the sensor can be operated to switch or to measure. Its area of application is short distances, and the sensitivity is adjusted simply via auto-teach, potentiometer or IO-Link.

Technical data (typ.)	+20 °C, 24 VDC
Service voltage	18 to 30 V DC

US-M18

The US-M18 is the standard variant in a short design, which makes this sensor very compact. It is suited for medium ranges and can be operated to switch or to measure. Thanks to three modes and other settings, the auto-teach is exceptionally easy. IO-Link ensures constant monitoring of the device functions and parameters and offers extended adjustment options.

Technical data (typ.)	+20 °C, 24 VDC
Service voltage	18 to 30 V DC

US-M30

The US-M30 is the right choice for large ranges up to 6,000 mm. It is distinguished by its compact, short design. The sensor can be operated to measure and switch. The US M30 is quickly operational thanks to simple teach-in and IO-Link.

Technical data (typ.) +20 °C, 24 VDC

Service voltage 18 to 30 V DC

USGT

The USGT ultrasonic fork sensors are balanced sensors for determining the position of edges in films and paper (transparent, non-transparent and reflective). The sensors are distinguished by a very high repetition accuracy. They are insensitive to dirt and have a robust metallic housing in a high protection type.

Technical data (typ.)	+20 °C, 24 VDC
Service voltage	8 to 30 V DC
For more information, visit	www.di-soric.com

US-Z ACCESSORIES FOR ULTRASONIC BARRIERS/SENSORS

By simply screwing on the deflection angle on sensors in the sizes M12 and M18, the exit of sound is deflected by 90°. This is advantageous for assembly primarily in narrow spaces.

Deflection angle for ultrasound sensors	For ultrasound sensors with thread M12	US-UW-12
	For ultrasound sensors with thread M12	US-UW-12
	For ultrasound sensors with thread M18	US-UW-18
