Max Jac® – Electrical Connections

Option Analog Feedback

Actuator supply voltage	[Vdc]	
MX12		12
MX24		24
Analog feedback type		non-contact
Analog feedback input voltage	[Vdc]	5
Analog feedback output voltage	[Vdc]	0.5 - 4.5
Analog feedback output linearity	[%]	± 1

- M Actuator motor
 S1 Double pole double throw (DPDT) switch
 F Fuse
 P Analog feedback device

Connect lead 5 to positive and 4 to negative to extend the actuator. Change polarity to retract the actuator. The analog feedback device is supplied between leads 1 and 2, and the output signal is generated on lead 3.

Keep in mind that the actuator voltage must be switched off when reaching the ends of stroke or due to a mid-stroke overload to avoid causing damage to the actuator.

Option Encoder Feedback

Actuator supply voltage	[Vdc]	
MX12		12
MX24		24
Encoder type		incremental
Number of encoder channels		2
Encoder input voltage	[Vdc]	5
Encoder output resolution	[pulse/mm]	
MX12W		9.86
MX12B		5.84

- M Actuator motor
 S1 Double pole double throw (DPDT) switch
 F Fuse
 E Encoder feedback device

Connect lead 6 to positive and 5 to negative to extend the actuator. Change polarity to retract the actuator. The encoder feedback device is supplied between leads 1 and 2, and the output signal train from channel A is generated on lead 4 and channel B on lead 3.

Keep in mind that the actuator voltage must be switched off when reaching the ends of stroke or due to a mid-stroke overload to avoid causing damage to the actuator.
